

## CLAIMS

What is claimed is:

1. Device for aiding the process of memorization comprising:

A portable housing made of plastic or other rigid material, said housing containing;

a microprocessor, a memory storage chip and associated electronic components that are designed to achieve the features necessary for creating a digital memorization aid including;

- a speaker;
- a volume control;
- a microphone;
- a battery power source;
- a Record/Play switch;
- a Rewind switch;
- a Forward switch;
- a Start/Stop switch;
- a Temporary Erase switch;
- a Permanent Erase switch;
- a Question Number display;
- a Memory use display;
- an On/Off switch;

a Headphone jack;  
an AC adaptor jack; and  
a digital line output jack.

2. Device for aiding the process of memorization as claimed in claim 1 wherein said memorization aid allows a user to quickly skip over questions and answers that are known to questions and answers that are not known.

3. Device for aiding the process of memorization as claimed in claim 1 wherein said user can temporarily erase a question and answer set, and then retrieve said question and answer set when needed.

4. Device for aiding the process of memorization as claimed in claim 1 wherein said user can see by said Question Number display, which question he or she is on.

5. Device for aiding the process of memorization as claimed in claim 1 wherein said user can see by means of said Memory use display, how much memory is left within said microprocessor.

6. Device for aiding the process of memorization as claimed in claim 1 wherein said can operate said portable unit by battery power or by AC line voltage.

7. Alternate embodiment of the present invention wherein a removable replacable memory card can be inserted into the device to store answers and questions.
